Mounted models «vario» and «roto»

Perfect spreading pattern

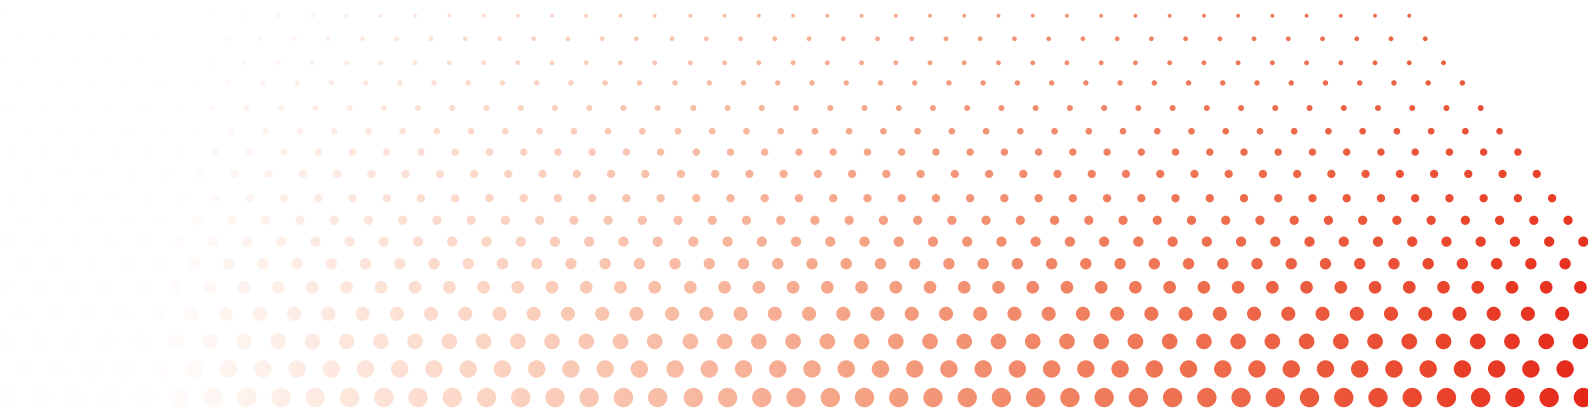

The Gafner brand stands for the perfect spreading pattern and a long service life, with simple operation and best design. Different attachment and detachment options offer maximum flexibility in field and meadow.

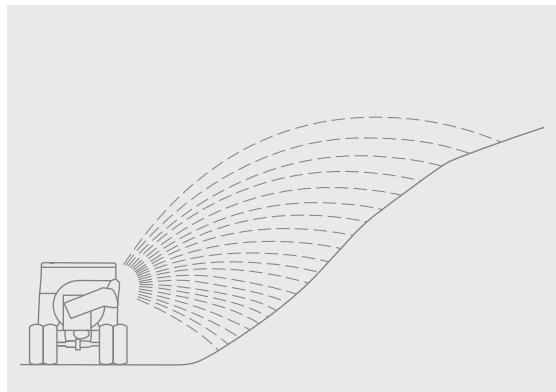

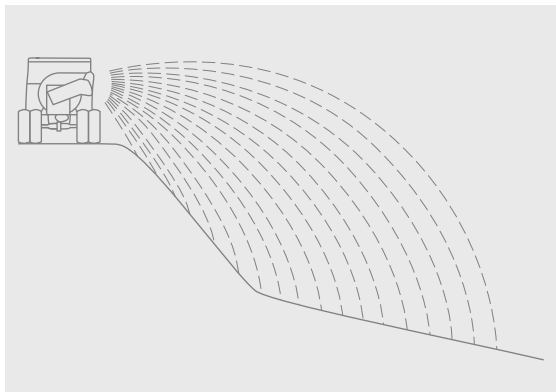

Gafner spreaders are characterized by a fine, perfect spreading pattern. The proven design with technical refinements guarantees even spreading of loaded material of any type – without any additional cost.

The perfect spreading pattern is guaranteed for any terrain and promises fast and regular distribution on meadows and farmland. The patented hydraulic adjusting compensator makes spreading uphill and downhill on slopes problem-free.

The robust and high quality construction, the hydraulic partition wall and the thorough processing of the planetary cutters enable a high quality spreading pattern. Gafner spreaders represent a long service life with low maintenance and repair costs.

With adjustable spread widths from 3 to 20 meters, Gafner spreaders provide precision in any application, whether spreading at an angle on a steep hill or in a straight line from the roadside.

Safety

Gafner mounted spreaders are suitable for all standard trucks, two-wheel tractors and drive trailers. To encourage optimal weight distribution the spreading mechanism – in comparison to the vario trailer – is mounted at the rear. Safe operation of the mounted spreader is thus guaranteed

The Gafner mounted models

The vario mounted model

Gafner's vario spreader, with its large adjusting angle of 60°, is the proven model which adapts optimally to any terrain.

The vario mounted model offers maximum flexibility- with different tank sizes for all requirements. It can be mounted on and detached from the various carrier models easily and in no time at all. With its stable parking supports, the Gafner mounted spreader can also be parked quickly and safely.

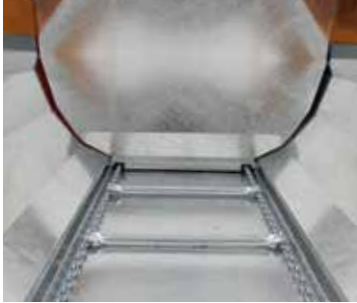

With its robust construction, hot-dip galvanized tank and high quality steel cutter, a long service life is guaranteed. The modular system enables the replacement of each – individual tool and thus guarantees low repair costs and simple maintenance. The highest technical refinements guarantee simple and convenient operation and maximum safety in any terrain.

Professional attention to detail results in perfect design. Gafner is quality and design in one.

The roto mounted model

The roto model has the same advantages as the vario high quality basic model and is also available in different sizes. The additional technical precision of the roto is provided by the rotating spreading head, which can be rotated 240° by means of a hydraulic motor. The Gafner roto mounted spreader is ideally suited for spreading on both the right and left sides in demanding terrain.

State-of-the-art technology

Partition wall

The hydraulically powered partition wall ensures clean and complete emptying of the loaded material.

Star-shaped rotor

The star-shaped rotor is the so-called feeder and ensures that the material is delivered to the ejection rotor evenly.

Planetary cutters

Even strong spreading material is reduced efficiently and evenly by the high quality steel cutter.

Ejection rotor

Hardened spreading tines and the patented spread width adjustment ensure a completely uniform spread distribution.

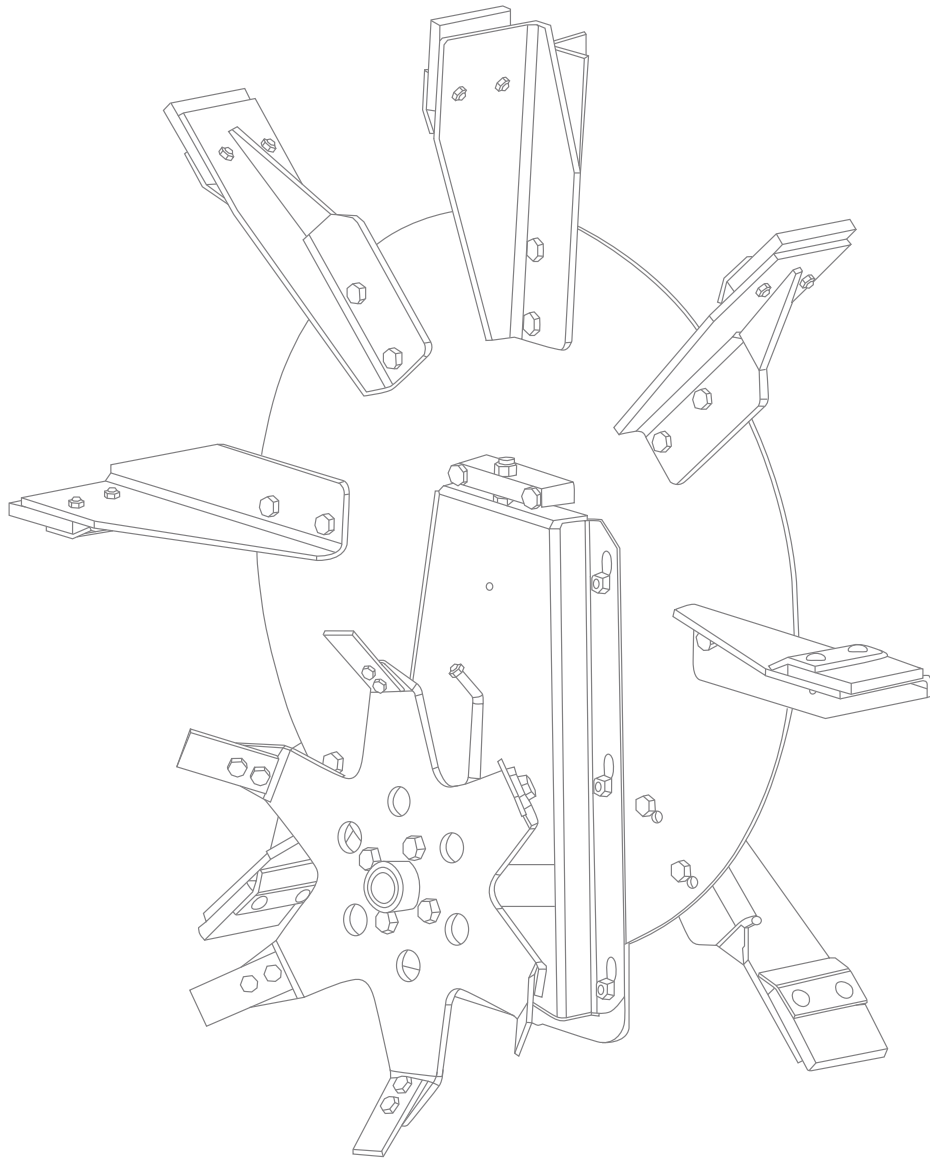

Scraper floor

The hydraulic scraper floor drive with 2-stage planetary gear and the quality chains provide a high tensile force.

Collision protection

Replaceable wood edge strips and a hot-dip galvanized tank save time and money in the event of damage.

Star-shaped rotor with milling planetary gear

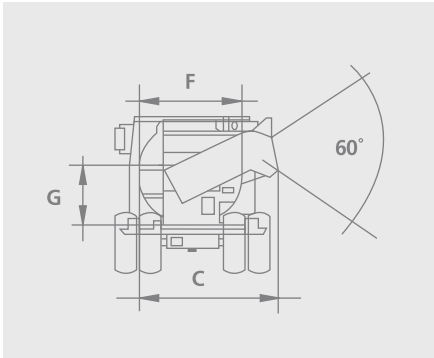

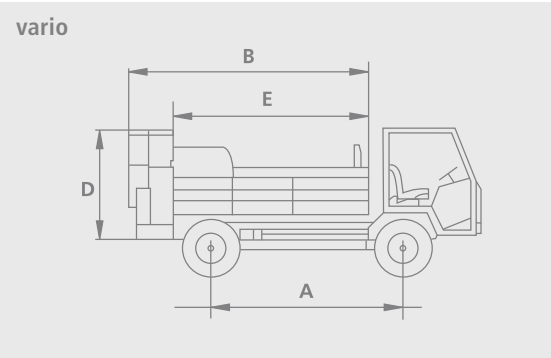

Gafner's clever modular system allows different combinations of individual components to form a whole. In addition, old modules can be replaced with new ones problem-free and cost-effectively.

List of dimensions

Mounted spreader «vario»

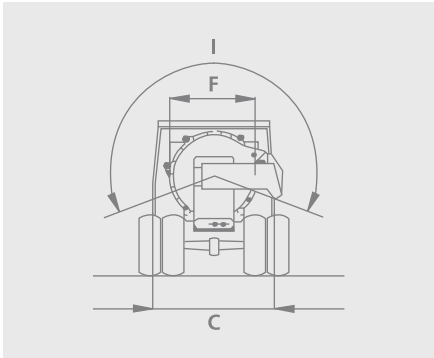

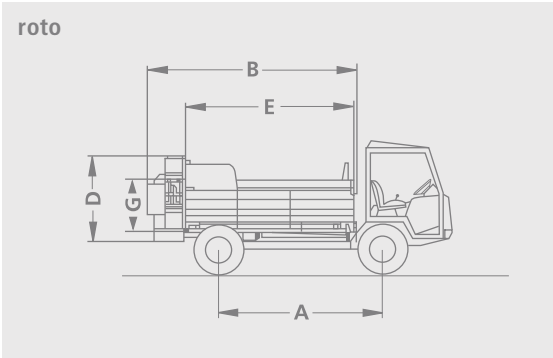

Spreader type	Content m³	Minimum wheelbase	Total length	Total width	Total height	Tank length	Filling width	Tank height	Empty weight in kg
		A	B	C	D	E	F	G
